Digital Literacy Project

Task 1: Digital Literacy Awareness Infographic

Tool Used: Canva (with custom icons and layout)

Description of Design: The infographic is designed as a comprehensive three-column resource for first-year students. It uses a warm amber and blue color palette to create a professional yet approachable aesthetic. The design is broken down into three distinct sections:

1. **What Digital Literacy Is?**: This section defines the core competencies including information evaluation, content creation, technical understanding, communication, and digital ethics.
2. **Useful Digital Tools**: I featured five essential tools for student productivity: Google Workspace for collaboration, Notion for organization, Trello for task management, Canva for design, and Grammarly for writing assistance.
3. **Safe Internet Practices**: This critical safety section highlights six actionable tips, including the use of password managers, enabling Two-Factor Authentication (2FA), protecting personal info, phishing awareness, managing digital footprints, and using VPNs on public networks.

The layout uses bold icons and concise bullet points to ensure the information is easily scannable for busy students.

Reflection: The most interesting part of this task was learning how to balance text and white space to avoid overwhelming the viewer. Initially, I found it difficult to narrow down the list

of "Safe Practices" to just six, but I chose the ones most relevant to college life in India (like UPI safety and public Wi-Fi security). One thing I found particularly interesting was the "Toolbox" concept—selecting specific software like Notion and Trello that I personally plan to use for my engineering studies. This task helped me realize that being a Digital Ambassador isn't just about sharing facts; it's about curating the most useful information for our peers.
